

Write a Python program to demonstrate Tower of Hanoi (Using Search Technique)

```
def hanoi(n, source, target, aux):  
    if n==1:  
        print(f"Move disk 1 from {source} to {target}")  
        return  
    hanoi(n-1,source,aux,target)  
    print(f"Move disk {n} from {source} to {target}")  
    hanoi(n-1,aux,target,source)  
hanoi(3,'A','C','B')
```

Write a Python program to demonstrate Monkey Banana Problem using (State-Space Search)

```
def monkey_banana():  
    monkey = input("Enter monkey position: ")  
    box = input("Enter box position: ")  
    banana = input("Enter banana position: ")  
    state = {"monkey": monkey, "box": box, "banana": banana, "has": False}  
    print("Initial State:", state)  
    state["monkey"] = state["box"]  
    state["box"] = state["banana"]  
    state["monkey"] = state["banana"]  
    state["has"] = True  
    print("Goal Achieved:", state)  
monkey_banana()
```
